

Master Plan Sub-Areas

WETLAND RESTORATION

This site has a variety of ecological conditions that present an opportunity for native plant restoration. By removing invasive, non-native species, installing a diverse community of native plants, and proper maintenance, the park can showcase native plant communities found throughout the State. These showcase areas can provide habitat for wildlife, learning opportunities and an overall aesthetic that will make the park a special place. Some common native wetland plant species include: Sedges, Virginia Wild Rye, Switch Grass, Prairie Cordgrass, Canada Manna Grass, Bulrush, Wild Rice, Fowl Manna Grass, Swamp Milkweed, Joe Pye Weed, Obedient Plant, Arrow Alum, Buttonbush, Swamp Rose, Chokeberry, Sycamore, Witchhazel, and Gray Dogwood.

AREA C The Hundred Acre Wood

Named for the Hundred Acre Wood in *Winnie the Pooh*, this wooded area is undisturbed and managed through a forest management plan. Proposed uses include low impact hiking, walking and running trails on the existing and expanded trail network. Trails parallel the babbling brook with pedestrian bridge connections to other parts of the park. On the knoll is a rustic woodland shelter that could be used for informal picnicking, an outdoor classroom or simply a place to rest or get out of inclement weather. The trail network also extends to the waterfall, naturalistic pond and wetland area. Parking and access to the site is from Haggerty Road and will likely be one of the first areas of the park to be developed for recreational uses.
